PROFESSIONAL SUMMARY

Flutter Developer specialized in building scalable, high-performance, and production-ready mobile applications using Flutter and Dart. Experienced in designing modern application architectures using Clean Architecture, Feature-First structure, Riverpod, and Provider. Developed real-world business applications including financial management systems, optimization platforms, reporting systems, and advanced dashboard interfaces. Skilled in RESTful API integration, Firebase services, offline storage, responsive UI design, performance optimization, and interactive data visualization. Passionate about building maintainable, visually polished, and user-centered mobile applications that deliver strong business value.

Technical Skills

- **Programming Languages:** Dart, JavaScript, TypeScript, PHP, Python, C++, SQL.
 - **Mobile Development:** Flutter, Responsive UI, Adaptive Layouts, Material Design, Cross-Platform Development.
 - **Architecture & State Management:** Clean Architecture, Feature-First Architecture, Riverpod, Provider, Async State Management.
 - **Backend & APIs:** RESTful APIs, Firebase, Node.js, NestJS, Express.js, Laravel.
 - **Databases & Storage:** Drift (Moor), SQLite, SharedPreferences, PostgreSQL, MySQL, Redis, SQL, NoSQL.
 - **UI/UX & Visualization:** Glassmorphism UI, Custom Widgets, Animations, Interactive Dashboards, fl_chart.
 - **Reports & File Handling:** Excel Processing, PDF Generation, File Import/Export Systems.
 - **Tools & Workflow:** Git, GitHub, GitLab, Agile, Jira, Swagger/OpenAPI.
-

Projects

Shift Pay – Smart HR & Financial Management System

- Developed a large-scale Flutter application for managing employees, payroll, attendance, inventory, and financial operations with modern Glassmorphism UI and responsive design.
- Built a smart voice-command processing system supporting Egyptian Arabic dialect for attendance, withdrawals, leaves, and financial operations using custom intent parsing and Arabic text normalization.

- Implemented advanced payroll, attendance, and inventory management systems with complex business logic, PDF reporting, analytics dashboards, and interactive data visualization.
- Designed the application using Clean Architecture, Feature-First structure, Cubit state management, Drift reactive database, and modular scalable architecture for high performance and maintainability.

Sajadi – Cut Optimizer Mobile

- Developed a Flutter application for optimizing carpet and fabric cutting operations using mathematical optimization workflows and intelligent grouping algorithms to reduce material waste.
- Implemented Excel import/export systems, PDF reporting, analytics dashboards, and interactive statistical visualizations for industrial workflow management.
- Built responsive Arabic RTL interfaces with modern Glassmorphism UI, customizable themes, and performance-optimized background processing for handling large datasets.
- Designed the application using modular architecture, validation systems, configurable processing workflows, and local file management solutions.

Mizaneyati Pro – Personal Finance Management System

- Built a scalable personal finance management application using Flutter, Riverpod, Drift, and Clean Architecture principles.
- Developed transaction management, budgeting systems, financial analytics dashboards, and multi-account workflows with strong validation and reactive local storage.
- Implemented interactive charts, reusable UI systems, responsive layouts, and modern animated interfaces for enhanced user experience.
- Designed modular architecture with type-safe database operations, maintainable business logic, and scalable state management workflows

Education

B.Sc. in Informatics Engineering – Software Engineering & Information Systems

Tishreen University – Latakia, Syria

Industrial Technical Secondary School – Computer Techniques

Ranked 1st at the Governorate Level

Languages

- **Arabic:** Native
- **English:** Intermediate (professional terminology proficiency)
